Size Guide

# repose Contur

## Repose® is a reactive air, pressure redistribution solution, clinically proven to effectively prevent and treat pressure damage by providing high levels of immersion and envelopment[1].

International guideline 5.12 recommends the selection of a reclined seated position with the individual's legs elevated[2], for individuals who spend extended time seated out of bed and who are high risk.

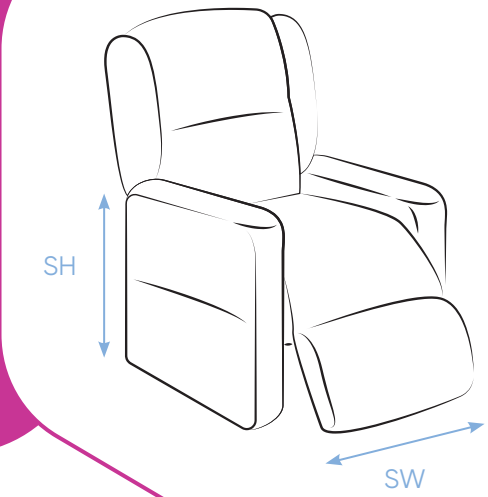

Repose Contur is indicated for patients using riser-recliner chairs, for the prevention and treatment of pressure ulcers, and to minimise the risk of pressure damage.

Offering pressure area care to the seat, back and leg sections, Repose Contur is a pressure redistribution cushion overlay, which secures to the chair easily and safely with integrated straps.

Repose Contur is available in a range of sizes to compliment the different sized riser-recliner chairs available.

### Choosing the correct size

1. Measure the seat width (SW)
2. Measure the seat height (SH)
3. Refer to the chart below to identify which size Repose Contur to order

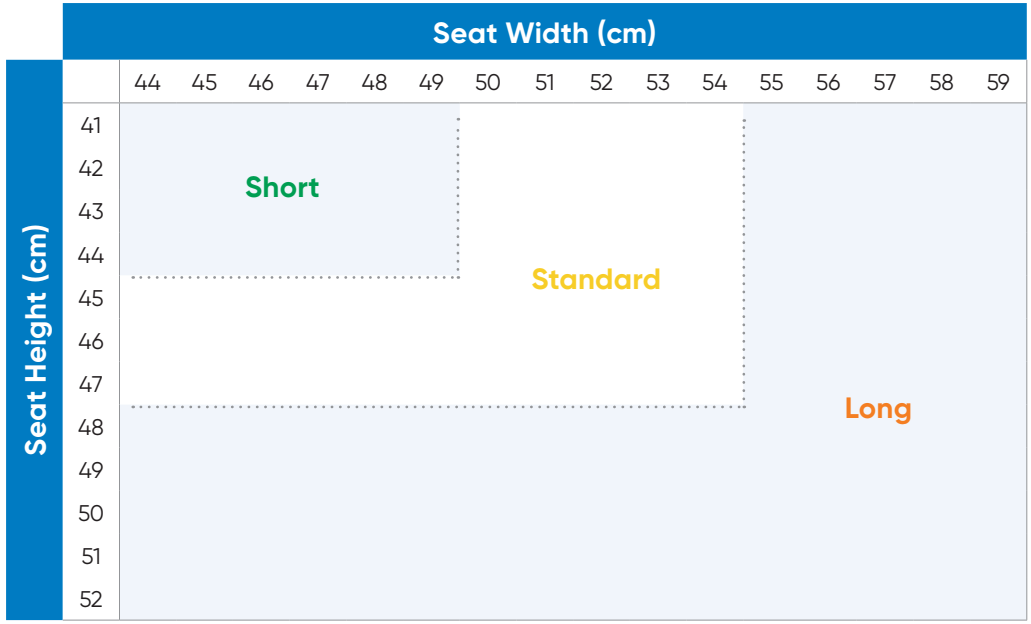

The Repose valve is colour coded for convenience and easy identification.

### Repose Contur Size Guide

| | **Short** without PU Cover, with Small Pump | **Standard** without PU Cover, with Small Pump | **Long** without PU Cover, with Small Pump |
